

UFED LINK ANALYSIS

Discover Connections Between Multiple Mobile Devices

Cellebrite's UFED Link Analysis allows field investigators to rapidly visualize key relationships between suspects and identify the connections and communication methods used between multiple mobile devices, based on reports from physical, logical and file system extractions.

Law enforcement, military, private, and corporate investigators can use UFED Link Analysis to turn vast amounts of raw data into actionable intelligence in the early hours of an investigation. Visual analytics can shorten investigation times, making operational planning faster and more efficient.

The Bigger Picture

UFED Link Analysis allows first responders and other investigators to discover the critical connections they need to shorten the time spent on investigations. For easy use in either the field or lab, investigators gain an immediate visual picture of the communication methods to understand the relationship between entities. With the ability to filter data down to its core, UFED Link Analysis transforms data into actionable information.

At a Glance

- Reveal communication links between multiple mobile devices based on a rich data set: mutual contacts, calls, SMS, MMS, emails, chats, application transactions, Bluetooth devices, locations and more
- Understand how entities are connected by visualizing data from multiple devices
- Filter data according to time and date, number of times contacts connected, and categories
- Visualize the communication directions between entities, pinpointing bidirectional and unidirectional communication
- Discover if entities were at the same place at the same time
- Drill down to specific events
- Share your findings with other investigators

Key Features

- **Mutual and All links graphs:** View the suspects and the entities
- **Entities analytics:** Statistical data shows the frequency of communication and preferred communication methods
- **Timeline:** Displaying a list of events in chronological order
- **Location analytics:** Analyze multiple suspects locations on a single map
- **Advanced filters:** Filter data based on date and time, communication methods, location types and distance
- **Project and table search:** Text search on all data available in the project or table
- **Report generation:** Customize reports containing detailed information and graphs
- **Graph snapshot:** Save an image of the current view
- **Project management:** Save the project information
- **Device owner data management:** Add data and pictures collected during the investigation
- **Data sources:** Data sources are UFDR files generated by UFED Physical Analyzer or UFED Logical Analyzer. It can contain data from logical, file system and physical extractions.

About Cellebrite

Founded in 1999, Cellebrite is a global company known for its technological breakthroughs in the cellular industry. A world leader and authority in mobile data technology, Cellebrite established its mobile forensics division in 2007, with the Universal Forensic Extraction Device (UFED). Cellebrite's range of mobile forensic products, UFED Series, enable the bit-for-bit extraction and in-depth analysis of data from thousands of mobile devices, including feature phones, smartphones, portable GPS devices, tablets and phones manufactured with Chinese chipsets.

Cellebrite's UFED Series is the prime choice of forensic specialists in law enforcement, military, intelligence, corporate security and eDiscovery agencies in more than 60 countries.

Cellebrite is a wholly-owned subsidiary of the Sun Corporation, a listed Japanese company (6736/JQ)
