

NEW

IWAL™
 INTERDICTION, WARNING & AIMING LASER

The new *IWAL* Ultra Power Point GREEN™ laser provides small unit leaders and individual operators multiple options to use the device for daytime and night time aiming, to warn prior to escalation of force, or as a visible target designator.

The Modulation mode emits eight strobing laser pulses per second. This feature allows operators

to hail and warn persons who may be approaching a military or law enforcement checkpoint, or to send a warning signal before escalation of force occurs.

The lightweight, low profile *IWAL* can be held using the optional hand grip or weapon-mounted without monopolizing valuable rail space.

FEATURES INCLUDE

- ▶ Rugged aerospace aluminum housing, MIL-SPEC Type III hardcoat anodized
- ▶ Hi-power, Lo-power and Modulation modes of operation
- ▶ Remote cable and integrated momentary activation switches
 - Single tap enables momentary activation
 - Double tap activates the laser in a continuous ON mode for two minutes or until pressed again
- ▶ Supplied with
 - Quick Release HT Mount (Patent Pending)
 - 7" remote cable switch
 - Battery
- ▶ Optional hand grip with push button switch, MIL-SPEC-1913 top rail or sub-miniature red dot sight available
- ▶ Manufactured in the U.S.A.

IWAL

- Visible green pointer (<200mW)
- Remote cable pressure pad switch
