

THERMAL CLIP-ON

ZIR 60

THERMAL CLIP-ON

Z-IR 60 Clip-On Thermal Device can be used as a hand-held or weapon-mounted system for observation, target detection or passive target acquisition during day and night in variety of environment conditions, including fog, rain, snow, smoke, total darkness. Z-IR 60 is an outstanding thermal imager with a great number of functions and perfect optical performance.

The sophisticated design of the Z-IR 60 Clip-On Thermal Device eliminates the need to remove the day sighting equipment since the Z-IR 60 mounts directly in line with a standard day optical sight.

Such a combination allows the soldier to avoid re-zeroing the rifle every time the sight set up is changed, since the primary sight remains undisturbed. The point of impact remains the same no matter how often or how many times the clip-on is mounted.
