VEGAS :: Virtual-ISP Interception system

- ▶▶ **VEGAS** is a strategic inline interception system. Vegas enables intelligence and law enforcement agencies remote, stealth and ISP independent inline interception capabilities from targeted IP networks, in different locations.

VEGAS uses tactical method of infiltration into a network. Once installed in a targeted network, **VEGAS** performs inline interception and fully monitors the networks, providing persistent and on-going intelligence information.

VEGAS can intercept concurrently many networks in different locations. **VEGAS** provides network visibility that cannot be provided by interception systems within the ISP.

VEGAS system provides intimate and meaningful information of any connected device within targeted networks at designated locations.

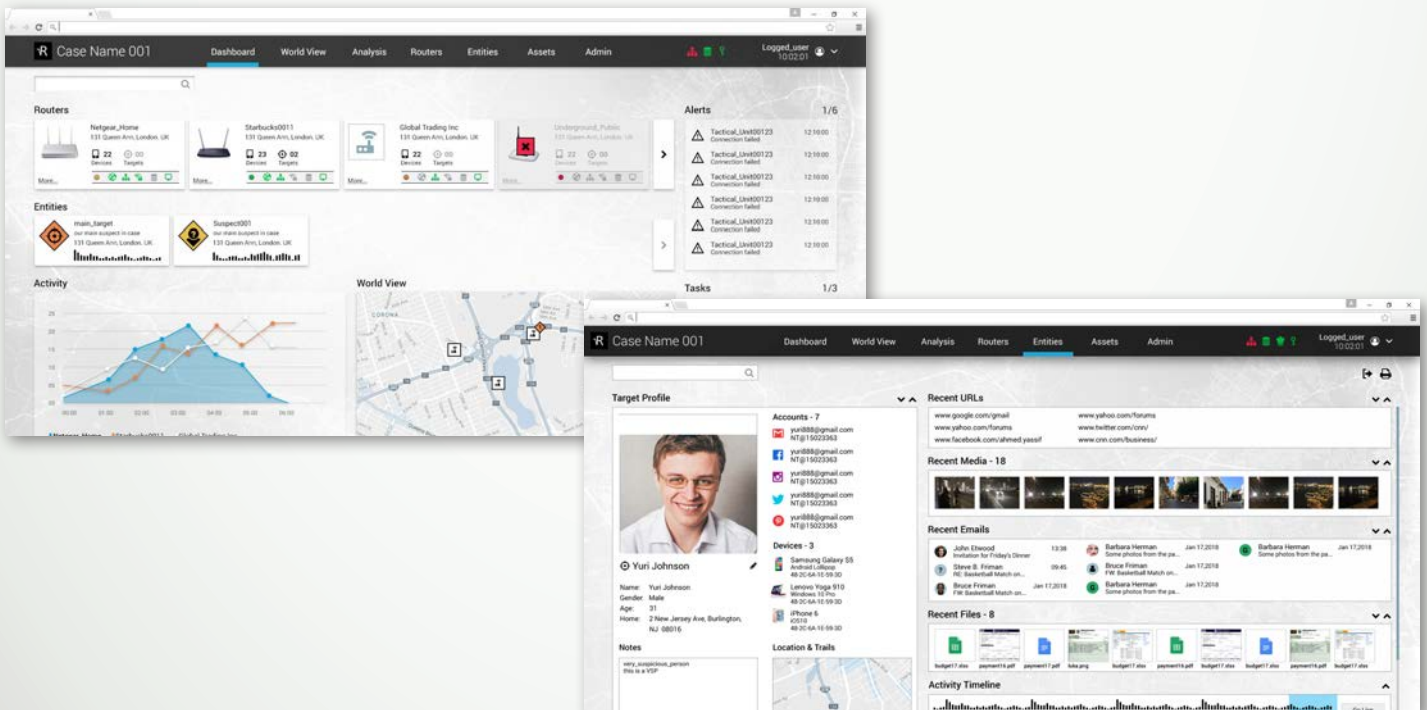

VEGAS : Virtual-ISP Interception system

Main Advantages:

- Sustainable solution – indifferent of technology updates
- Fits any MODUS OPERANDI – flexible, scalable, adaptable solution
- ISP independent
- Leaves no trace on the target's device
- Agnostic to device and operation system
- Handles many devices simultaneously, from various locations
- VEGAS as an Enabler – fitted-for facilitating 3rd party interception tools
- Stealth, secured and safe communication

Intercepted data includes:

- E-mail accounts credentials (Gmail, Hotmail, Exchange, Native, etc.)
- Social Media credentials (e.g. Twitter, Instagram, etc.)
- Cloud drives credentials (Dropbox, Google Drive)
- Device's details (PC/Mobile, Brand, OS type & version, MAC, IP, MSISDN, IMEI)
- Media – Pics, Audio streams, Video Streams
- Network traffic (PCAP)
- URLs and browsing history
- Target's location – past and live
